Education

JSS Academy of Technical Education Noida (JSSATEN), India

2020 - 2024

Computer Science and Engineering | CGPA: 8.1

Professional Summary

Software Engineer skilled in building high-scale backend systems and WhatsApp automation platforms using **Python, Django, and Spring Boot**. Optimized applications handling over **200,000 daily transactions** and developed secure authentication, payment, and ticketing solutions for Fintech and GovTech.

Work Experience

Pelocal Fintech Private Limited | Software Engineer

Feb'24 - Present

- Designed and implemented a standalone authentication backend, enhancing security and streamlining user verification for high-volume applications.
- Optimized DTC and DMRC systems by introducing Redis caching and load balancing, reducing response times by **40%** and improving scalability to handle over **200,000 daily transactions**.
- Developed the Mumbai Metro WhatsApp Ticketing System by integrating with the Route Mobile chatbot platform, implementing secure payment gateway integration, and engineering a seamless end-to-end ticket booking flow using Python, Django, SOLID principles, and scalable system design concepts.
- Spearheaded initiatives to optimize code and manage traffic across servers, reducing operational costs by 15%.
- Integrated and maintained multiple payment gateways including Zaakpay, PayU, and SBI ePay, enabling secure and reliable payment processing across fintech workflows; worked closely with gateway documentation, callbacks, checksum validation, and transaction reconciliation.
- Engineered advanced **LLM-based workflows** using **LangChain** and **LangGraph**, enabling **multi-step reasoning, context-aware conversations, and automated task orchestration**.
- Implemented scalable **AI pipeline architecture** integrating **prompt engineering, API orchestration, and real-time decision flows**, enhancing chatbot accuracy, responsiveness, and user engagement.

Projects

Maharashtra State Electricity Distribution Corporation Limited (MSEDCL)

- Integrated MSEDCL (Maharashtra State Electricity Distribution Company Limited) consumer services into a WhatsApp chatbot, enabling features such as **electricity bill payment, bill download, complaint registration, solar application, and complaint status tracking**, improving customer self-service and automation.
- Developed and deployed an employee self-service WhatsApp chatbot for MSEDCL with functionalities including **salary slip download, leave management, and Mahavitaran service integration**, enhancing internal process efficiency and accessibility.
- Built scalable chatbot workflows leveraging **API integrations**, backend automation, and real-time service orchestration, ensuring secure, **high-availability** interactions and improved user experience across consumer and employee use cases.

Bhubaneswar Municipal Corporation (BMC)

- Designed and developed a comprehensive **WhatsApp-based** system using Python for the Bhubaneswar Municipal Corporation (BMC).
- Integrated multiple services, including **property tax payment, trade license application, and bookings for Kalyana Mandap and water tanks**.
- Engineered a secure and scalable platform to handle thousands of daily transactions, improving citizen access to essential municipal services.

Authentication and Auth Service (Microservice)

- Managed and secured access within a multi-user system involving various roles and permissions.
- Integrated APIs for **user authentication, authorization**, and business operations.
- Handled user login via phone and MPIN to generate access tokens.
- Generated business tokens based on user credentials and validated permissions.

Mumbai Metro WhatsApp Ticketing System (MMOCL)

- Designed and developed a complete **WhatsApp-based metro ticket booking system** integrated with the Route Mobile chatbot platform.

- Engineered the full ticketing flow using Python and Django, applying SOLID principles and scalable **system design** concepts.
- Integrated secure **payment gateways** for a seamless booking experience.
- Enabled users to **select stations, choose the passenger count, complete payment, and receive tickets** instantly on WhatsApp.

Skills

Java | Python | Data Structures and Algorithms | JavaScript | ReactJS | Django | Docker | PostgreSQL | Spring Boot | Agentic AI | Git

Certifications

- **Advanced Python & Django Certification (Udemy):** Gained expertise in **Python programming, Django framework, REST API development, ORM, authentication, and scalable backend architecture.**
- **Agentic AI Certification (Udemy):** Trained in **Agentic AI systems, LLM-based application development, autonomous agents, LangChain, LangGraph, prompt engineering, and workflow orchestration.**
- **Spring Boot Certification (Udemy):** Acquired hands-on experience in **Java, Spring Boot, microservices architecture, RESTful APIs, dependency injection, and backend service development.**

Achievements

- **Hackathon Winner – Shiv Nadar University:** Secured 1st position among 100+ participants by building an innovative, scalable technology solution, demonstrating strong problem-solving, system design, and rapid prototyping skills.
- **Top Performer – GeeksforGeeks:** Achieved Institute Rank 10 with 500+ DSA problems solved, showcasing expertise in Data Structures & Algorithms, competitive programming, and analytical problem-solving.
- **Global Ranking – LeetCode:** Ranked in the Top 30% globally, reflecting proficiency in algorithms, coding efficiency, and scalable system thinking relevant to software engineering and distributed systems.
